# SEED CATALOGUE

1881.

# Spooner's Choice Flower Seeds.

BALSAM, CAMELLIA FLOWERED. No. 107.

Every farmer or cultivator of land, on however small a scale, should take one or more of the best and most progressive Agricultural and Horticultural Papers or Magazines. A selection from any of the following will be found desirable:

## SOME EXPERIENCE IN HARDY ROSE CULTURE:

Or, Rose Growing Simplified.

AN ESSAY BY

#### WILLIAM H. SPOONER,

Chairman Plant and Flower Committee, Massachusetts Horticultural Society.

Read before the Massachusetts Horticultural Society, Boston, Mass., January 8th, 1881, The Worcester County Horticultural Society, Worcester, January 27th, 1881, With some additional notes.

The above Essay mailed free to every purchaser of \$1 worth of seeds.

A List of Hybrid Perpetual Roses, budded upon the Manetti Stock, fine imported Plants, will be mailed free to applicants about April 1.

28 Some varieties of vegetable seeds are quoted at higher rates this season, such as thinkled Peas, Cabbage, Celery, Onion and Turnip seed, the long-continued drought of the past season seriously lessening the seed harvest.

## lllustrated Gardening

### SEED CATALOGUE.

#### A WORD TO PURCHASERS.

All my seeds are carefully tested before sending out, to prove their germinating qualities; they are grown on my own grounds, or by skilled French, German or American cultivators.

Seeds and Bulbs Free of Postage.—The present postal law authorizes the sending of seeds and bulbs to all parts of the United States at the rate of one cent per ounce. It matters not how many varieties are sent, provided the weight does not exceed four pounds; if larger lots are wanted, they can be divided into four pound parcels; this arrangement enables persons in distant parts of the country to obtain seeds and bulbs as cheaply as our nearest neighbors, as I pay the postage here and guarantee the safe arrival of the goods at their destination. The exceptions to this rule are when Grass Seed, or heavy goods are ordered by the pound, quart, peck or bushel, or in articles at special quotations.

By Express. We can frequently send mailable parcels as cheap by express as by mail, and prefer to do so when just as convenient to purchasers, in which case we pay express charges. Customers will please name their nearest express office, and if convenient to receive goods in this way; but we desire to have it clearly understood that we do not agree to pay transportation charges on heavy articles quoted by the pound, quart, peck, etc., unless the cost

of the same, 16c, per pound, or 20c. per quart extra, is remitted with the order.

To Prevent Mistakes.—Please write full Name, Town, Country and State, plainly. We frequently receive orders with neither name nor address, and all such have to wait the

sender's complaint that his or her seeds have not come to hand.

P. O. Box 3125.

The Safe Arrival of Goods Guaranteed.—I guarantee the safe arrival of packages in good condition to my customers; if not received by them in seasonable time, I will, upon being notified, and receiving a duplicate of order, with date, refill the same without additional expense to customers; as my desire is to deal honestly with all who may favor me with their patronage, without giving them any more expense or risk than if purchasing from a neighbor.

How to Order.—In ordering flower seeds or gladiolus, it is only necessary to write the number, which is a great saving of time and labor to both the purchaser and ourselves. In ordering vegetable seed, it will be necessary to mention the variety. Please be particular to WRITE THE QUANTITY PLAINLY.

#### HOW TO SEND MONEY.

With the following precautions in sending money it can be sent at MY RISK and EXPENSE, by Post Office Money Order, costing from 5c. to 25c., and perfectly safe. All offices are not authorized to issue them. Drafts on New York or Boston, costing about 25c, Most banks issue them. Registered Letters.—All postmasters are obliged to register when requested to do so. Enclose the money in your letter in his presence, and take his receipt; it costs 10c. When remittances are made in conformity with above directions they can be sent at my expense by deducting cost from amount sent, for orders of \$1.00 and upwards.

My Guarantees.—With the terms which I propose to purchasers, it will be seen there is absolutely no risk in sending to me for seeds. 1st, I warrant that all money sent as previously directed shall reach me safely. 2nd, That all goods bought of me shall reach the purchaser in good order and condition. 3rd, If any seeds purchased of me are not as represented, I will replace them with other seed, either this season or next, free of charge.

Or, in other words, I guarantee everything but the crop, that Iclearly cannot do, there are so many causes to affect the latter from peculiarities of season, soil, or mode of culture, that are entirely beyond my control. Orders Promptly Executed. Address,

WILLIAM H. SPOONER, Boston, Mass.

Office and Gardens-Centre, near Boylston St., Jamaica Plain District. HORSE CARS FROM TREMONT HOUSE.

#### HINTS ON THE SOWING OF SEEDS.

Annuals, though largely grown on account of the convenience of having them so quickly in bloom after sowing, have come into some disfavor through their supposed fugacious habit. It is easy to show, however, that much of the ephemeral quality is due to errors on the part of cultivators rather than to the nature of the plants. To cultivate Annuals properly they should have the same care as Geraniums, Verbenas, or such like, especially in the fact of giving them room to grow in. The too common practice of sowing Annuals as thickly as mustard and cress, and leaving them thus huddled together in a dense mass, produces, it is true, a rapid effect in the speedy production of flowers; but the plants are soon exhausted and wither away. The remedy is obvious: they must be "thinned out," or planted out at a fair distance from one another, and with room to produce both root and leafage. The blooms will come in due time, upon handsome and well-furnished plants, and continue to encourage the cultivator, more or less, throughout the whole summer.

Hardy Annuals may be sown out of doors as soon as open weather has fairly set in, about May, or beginning of June. From this time outwards to the end of early summer rains, sowings may be made. Sow thinly on finely raked soil; as the plants rise, thin them out carefully, until they stand ultimately at a sufficient distance from each other to allow of the growth peculiar to the species. Tall or spreading kinds will require to be eight to twelve

inches apart; smaller kinds of course, less—say three to eight inches.

Half-Hardy Annuals are those which, being of a tenderer nature than the above, will not germinate in soil at so low a temperature. They, therefore, need to be raised under glass, or some protection, or their sowing deferred until the out-door temperature is suffi-

ciently high. This is usually the case from the end of May to middle of June.

Biennials and Perennials for out-door culture, are best sown in the open ground in June or July; rainy, moist weather should be chosen, and their management will then be of the easiest and simplest kind. When large enough to handle, plant the seedlings out, either at once into the quarters where the plants are to remain, or into some spot out of the way, to be ultimately transferred as required into the position they are to occupy, if possible, not later than September or October. Many of these if sown early under glass and transplanted will bloom the first season from seeds.

Greenhouse or Stove Plants raised from seed are treated in the way above described, but in the hot-bed for the first stage. The greater the amount of heat, with proportionate moisture, the better for stove kinds; when up and large enough, they are potted off, either at once singly, or several together, with another shift later. Ultimately, they occupy posi-

tions singly in pots, in the stove or greenhouse as the case may be,

Sowing should never be done upon soil in a very wet condition. As a general rule, the surface should be rather dry than wet. Seeds should never be sown too deep; this is a fertile cause of failure with the inexperienced. A depth of about twice the average diameter of the seeds themselves is a good general principle to follow in this respect. This will bring the majority of seeds but just under the surface, and some of the very finest will not be actually covered at all, but just sprinkled over the surface and a little pressure applied. This is quite sufficient. As a rule, the more thinly the seeds are strewn the better. If seeds are sown in dry weather, water must be given from a fine rose water pot, and unless rain comes, must be followed up regularly every day or two, as it is certain to be fatal to seeds just sprouted if absolute drought should overtake them. It is obvious that moist and rainy weather is the best for seed sowing. If the water-pot is used, it must be done with judgment. An excess of moisture is as harmful as too little, and will produce decay. The seedsman repeatedly gets blame for the non-growth of seeds when the failure is entirely attributable to neglect of the above precautions.

An English cultivator suggests the following theory for germinations: "Sow your seeds in the usual way, only cover up and keep in total darkness until they begin to peep above the soil, then gently and gradually expose them to the light; the success of all good seed

will follow, and become a lasting practice and benefit.'

#### SPECIAL PREMIUMS TO FORMER PATRONS.

Any of my former patrons sending me the name of a new customer, with order to the amount of \$\$1.00, or upwards, enclosing the sum as before directed, can select in addition to such order, seeds in packets to the amount of one-half the order so sent. I make this liberal offer feeling sure my old customers will be glad to help me extend my business in their neighborhoods.

Evidence of Quality.

I have never had as good a garden as the year I bought seeds of you. I received your new Guide which I was glad to see; enclosed please find an order.

Yours respectfully.

L S. G.

#### THE FORMATION OF CLUBS.

Desirous of extending the cultivation of my flower and vegetable seeds as extensively as possible through the country, and knowing there may be persons in a neighborhood who will not take the trouble, perhaps, to get my Catalogue, and send for seeds, I offer the following inducements to those who wish to purchase largely, or for the formation of clubs, by which a great saving can be made. The seeds will be forwarded, BY MAIL, POSTPAID to one address, or in separate packages, and mailed to the address of each individual forming the club, on receipt of the price.

Persons	sending	\$1.00	may select	seeds	in packets,	amounting	to \$1.25

### OBSERVE.

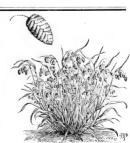

Astor, Balsam, Petunia; particularly to the large flowered fringed varieties of the latter, which are very beautiful. Pansies, Phlox Drumondii, Stocks, Verbenas, which are very fine, and to my large and unequalled assortment of Nasturtiums and Tropæolums, both the tall and dwarf varieties; they constitute in themselves a perfect flower garden. The displays of the latter flowers which I made last season before the Mass. Horticultural Society, in Boston, several times, the New England Agricultural Society, at Worcester, and the Rhode Island Society, at Cranston, R. I., were the admiration of all who saw them, and a new developement to most persons; in the wonderful diversity and variety of color, there is perhaps no annual grown to equal them; they adapt themselves to all circumstances, and will grow anywhere, with a wonderful profusion of flowers from July until hard Autumn frost.

## BULBS AND TUBERS

For Planting in Spring.

## GLADIOLUS.

The Gladiolus of late years, from the success of the French Hybridisers in the great improvement of its flowers, has become the most popular of our Summer flowering bulbs, adapted to the simplest culture.

In growth, robust, erect, with green sword-shaped leaves, and magnificent flower-scape rising from three to five feet in height, in all shades of color, from bright red to almost pure white and yellow, it is suitable for any prominent garden decorative purpose; for a succession of bloom, plantations can be made from April to the last of June.

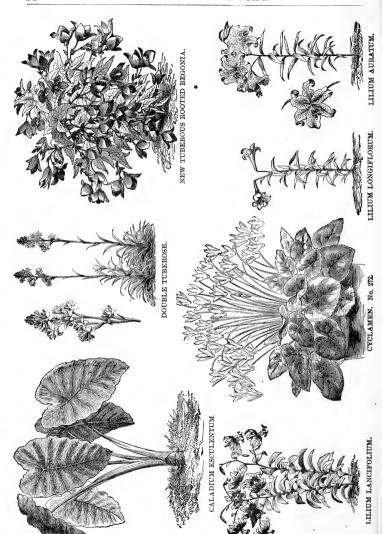

In the Fall the bulbs should be taken up and carefully dried, and stored for the Winter, where they will be free from frost.

All Bulb orders received during cold weather will be retained until the Bulbs can be sent with safety. If orders are received for seeds at the same time, the latter will be forwarded at once.

Purchasers selecting twelve varieties from the above list, will be entitled to a discount of ten per cent from Catalogue prices; twenty-five varieties, a discount of twenty per cent.

The following collections are made up with very fine varieties, although the prices are low; my own My seedlings are about as good as named kind. 12 choice Hybrids, mixed seedlings.... 1029. Miss L. H. F.

Price per Doz. Lillium auratum (Gold Band Lily). They should be planted not less than six inches deep, and with an inch of sand at the base of the bulb, this being most necessary in soil of a tenacious character. Treated in this manner, if the soil is well drained, they have proved perfectly hardy. Fine bulbs of this variety very scarce; 60 cts., 75 cts., and \$1.00 each. Lancifolium rubrum, 20 cents each. Roseum, 20 cents each.
Album, 35 cents each. --- Monstrosum rubrum, white and crimson, 50 cents each. - Album, pure white, 50 cents each. - Macranthum, 50 cents each. - Punctatum, white, spotted salmon, 40 cents each. - Melpomone, deep crimson, beautiful, 75 cents each. Candidum, OLD GARDEN, OR ANNUNCIATION LILY.—This valuable old favorite should be planted early in the autumn to enable it to make the usual fall growth thus it is almost impossible for them to bloom the following season; each 15 cents......81,00 Excelsum, beautiful buff, each 75 cents. Longiflorum, (Japonicum), one of the best for pot culture. This is perfectly hardy if lifted in September. The check given by this treatment is sufficient to prevent any fall growth, and the bulbs may be planted again just before the ground freezes. Although this is the opposite treatment of that recommended for Candidum, it is just this that renders Longiflorum hardy; each 10 Begonia, tuberous-rooted new hybrids of Boliviensis, Sedenii, Chelsonii, Vietchii, etc. Good bulbs having already flowered. These splendid varieties, producing branchy and at the same time tufty plants of about twelve to eighteen inches high, are covered during the whole summer and until frost sets in, with bright and elegant flowers; succeeding as well in the shade as in the sun. Each 40 cents. Calocasia (Caladium) Esculentum, a highly ornamental foliage plant with immense leaves, having a tropical appearance, adapted for the centre of beds. borders or pot culture: 25 to 40 cents each. Delphinium formosum grandiflorum. Seedling plants in fine colors, various 2.00 tal subject for forcing early for cut flowers in pots for greenhouse and house culture; 15 cents each...... 1.50 Hoteia Japonica (Spiræa), white, feathery plumes, elegant glossy foliage, for forcing in pots for spring bloom; perfectly hardy; 20 cents each by express, 25 cents each by mail..... 2.00 Tritoma uvaria, (Red-Hot Poker Plant), a beautiful class of bulbous plants, flowering in midsummer and until frost, throwing up a tall flower scape three to five feet high, with beautiful racemes of orange-scarlet flower-tubes; 20 cents each per express, 25 cents each per mail...... 2.00 Yucca filamentosa, (Adam's Needle), a striking plant, with a tall flower stem, four to five feet high, crowned with beautiful umbels of waxy-white flowers; strong plants, 50 cents each. Tuberose. This is pre-eminently a plant for everybody. Its lovely waxy flowers are so fragrant that a few pips will perfume a room, or a single plant a greenhouse; but especially it is of value in furnishing a continuous supply of blooms for bougets and decorations generally. The pips may be taken off as they expand, and as they do this gradually, a few plants will provide for a long period. When started early in the season (January), a slight bottom heat should be given, as at this time of the year they are slow to start; later they do not require it. Transplant in May or June to the open ground. Common, 10 cents each, strong bulbs..... .90 Pearl (new), of dwarf habit and exquisite fragrance, 10 cents each...... 1.00 We had some of your seeds last year, and a much larger per cent, vegetated than I am accustomed to having. The Boston Marrow Squashes were wonders.

Miss L. H. F.

MR. SPOONER.—I can say with truth after using your seeds for six years that they germinate for me in our hotdry climate better than any others I have received.

## NOVELTIES

AND

# Desirable Flower & Vegetable Seeds

OF RECENT INTRODUCTION.

IN ORDERING SAY FROM NOVELTIES.

FLOWER SEEDS.	
CALENDULA OFFICINALIS, "METEOR." New variety of the Marigold, with very large imbricated double striped flowers, bright deep orange on a pale straw color, almost white ground; the stripes very striking; blooming until	Pkt.
mignonette, Galloway's White, a very fine new pure white  Golden Yellow, a distinct and fine variety, with large spikes of in-	20 25
tense golden yellow color; a very attractive sort	50
Sunflower; well adapted for ornamental groups	25 20
mixed colors, perfectly hardy	25
VEGETABLE SEEDS.	Pkt.
LETTUCE, PAPER WHITE CURLED HEAD, a very tender and very early variety of Lettuce, desirable for forcing or for the open ground	20
NEW DWARF OKRA, an improvement on the old Okra; grows about 14 inches	
high, with long slender pods; very productive	25
vored, growing about eight or ten inches high	15
winter Squash, vigorous grower and productive; often setting the Squash near the root like the bush varieties, it commences to run and will frequently attain a length of twenty feet; the Squashes are from four to six inches in diameter; flattened; of a creamy white color; ribbed. The flesh is fine	
grained, dry and sweet, and is a remarkable keeper. Five packets for \$1.00 LOWS NEW PREMIUM TURBAN SQUASH, this new and very fine Squash is a cross between Hubbard and American Turban, having the color, shape and	<b>2</b> 5
excellence of the Turban, with the dryness and hard shell of the Hubbard.  The flavor is rich, fine grained and very sweet; one of the best keepers and very productive. Being earlier than any other running variety, can be	
planted later in the season, or as a second crop; per oz., 30c., per lb., \$2.50  NEW SURPRISE MELON, this new Melon has a thin cream-colored skin, thickly netted; the flesh is of a deep salmon color and very thick, of delicious flavor, very early and prolific. All those who have tasted it pronounced it without exception the finest they have eaten. The seed we offer is from selected	15
specimens; per oz., 40 cents.  SWEET CORN, EXTRA EARLY TOM THUMB, a very early eight-rowed variety, producing fair sized ears; kernel large, white and sweet; has proved one of the earliest; is very tender, resembling the Crosby or Evergreen in flavor; a	15
valuable sort for market gardeners; per quart, 35 cents, by mail 55c  TOMATO, LIVINGSTON'S PERFECTION, a new variety of great merit, raised by the originator of the Acme and Paragon varieties, and superior in all respects: shaped like the Acme, but larger, perfectly smooth, blood red in	15
color, bears abundantly until frost, free from seeds; excellent for canning or	25

#### BOSTON MARKET

I can confidently recommend my stock as being of the best quality, having been selected with the greatest care and carefully tested.

Some changes have been made in the quotations for vegetable seeds this season. We have fixed the prices the pound at lowest rates at our office, and if ordered sent by mail, 16 cents per pound, or fraction, must be added to cover mail charges. As formerly, seeds by the packet and ounce will be forwarded by mail at catalogue rates, free of extra charge. In all quotations by express, delivery charges to be paid by purchasers.

#### ARTICHOKE, CYNARIA SCOLYMUS.

Sow the seed in light, rich soil, in April; the following Spring transplant to permanent beds of moist rich loam, two feet apart each way. Large Green Globe, best for general culture.....

#### ASPARAGUS. ASPARAGUS OFFICINALIS.

Sow in drills eighteen inches apart, in April, in a good rich soil; two years old plants should be used in planting, burying the crown just under the surface.

Conover's Colossal, the best of all, very large.....

#### BEANS.—Dwarf. Bush, or Snaps. Phaseolus Vulgaris.

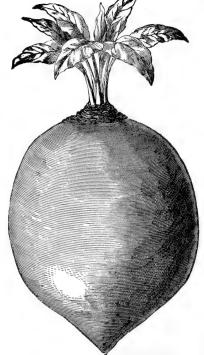

Do not sow until the weather has become thoroughly settled, and the ground warm; cover the seed lightly. The following varieties of this class will be found to be the best.

15 cents per pint, 25 cents per quart, extra, when ordered by mail.		000.
	Pkt.	Qt.
Early Long Yellow, six weeks, very productive, used for string or shell beans	10	25
Valentine, pod long, round and tender	10	25
Refugee, or Thousand to One, a very prolific bush bean, not early	10	25
Mohawk, very hardy, early and productive	10	25
Large White Kidney, or Royal Dwarf, one of the best late kinds, excellent		
green, and has no equal for winter use	10	20
Dwarf Horticultural (true), a half-bush sort, very prolific, excellent green or		
dry, a good market variety	10	40
Dwarf White Wax, excellent variety, pods and beans white, early and prolific	10	30
Black Wax, pods yellow, superior string bean	10	30
Golden Wax, new dwarf; a very superior variety, with yellow transparent		
pods; valuable as a shell bean	10	30
White Marrow, the best for baking, a standard field sort, very prolific	10	20

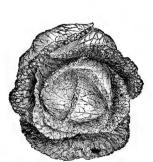

Remit 16 cents per pound, or fraction extra, when ordered by mail.

MANGEL WURZEL. Spooner's Improved Mammoth Long Red.

MANGEL WURZEL. Champion Intermediate.

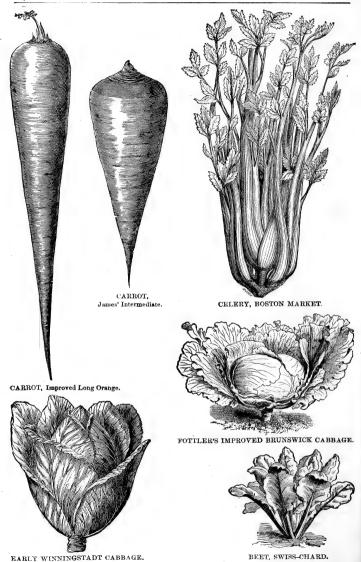

SAVOY. Little Pixie.

CAULIFLOWER. Lenormand's Short Stem.

# BORECOLE, or KALE. Brassica Oleracea Acephala. To secure a good crop of this useful winter vegetable requires a deep, rich soil,

deep and heavily manured. Sow about the middle of April, covering the seed thinly;
cultivate same as cabbages. Pkt. 0z. Lb. Tall Green Curled Scotch, a large and useful variety
ket sort
BRUSSELS SPROUTS. BRASSICA OLERACEA VAR.
Sow in May, in the same manner as Broccoli, and transplant in July. They become very tender when touched by frost. The numerous small heads, when boiled and dressed with butter, make the most delicious dish of vegetables on the table.  Pkt. Ok.
Imported, very compact, produces in great abundance the whole length of the stem
BROCCOLI. Brassica Oleracea Botrytis.
Sow early sorts as soon as the ground can be worked in the spring, in shallow drills drawn three or four inches apart. Plant out two feet apart each way, when plants are four inches high. Cultivate same as cabbage; rich soil. Closely allied to the Cauliflower. Pkt. 02. Pkt. 02.
Early Purple Cape, a distinct variety of a purple color, excellent flavor, the best for the North
CABBAGE. Brassica Oleracea Capitata,
Sow the early sorts in autumn, and protect by a cold frame during the winter, transplanting early in spring; or in hot-beds during February and March, and transplant middle of April; or sow the seed in open ground as early in the spring as the ground can be worked. Sow for later crop in April and May. They should be sown in shallow drills four to six inches apart. When the plants are six inches high, transplant into richly manured ground, the early kinds two feet apart; the later kinds, for winter use, three feet apart. The ground must be deeply loosened and worked thoroughly to grow large and good heads. Hoe often to kill weeds, and draw some earth up to the stems. If troubled by the cabbage flea, sprinkle the plant with soot, wood ashes, lime or Scotch snuff.
Cabbage, Henderson's Early Summer, a popular market sort, very
early, large and solid; comes in just after the Wakefield
Early Wyman, very popular early market sort, grows to a very
large size, and best quality

Early Jersey Wakefield, true, a favorite variety in the markets of Boston and New York; is very early, medium size, good quality. 10

Early York, very early, valuable for spring and summer.....

Early Winningstadt, a splendid stock, one of the best in cultivation, comes both early and late, heads cone-shaped, solid and hard; does well in all soils....

Large York, larger and somewhat later than Early York; good market sort....

Late Drumhead, English, a large winter sort; very compact, large round head.....

Premium Flat Dutch, very desirable for a winter market; keeps well..

### SAVOY CARRAGE.

	Pkt.	Oz.	Lb.
Improved American, very reliable for heading, of superior flavor; much			
esteemed for family or market use	10	25	3.00
Carter's Little Pixie, a very distinct dwarf sort; the heart is compact and			
very firm; the best for domestic use	10	20	2.50

### CARROTS. DAUCUS CAROTA.

Sow early varieties as soon as the ground can be worked in spring, on a border with warm aspect. The main crop should be sown about the first week in May, in drills about

fifteen inches apart. Carrots do the best in sandy loam, well manured.			
	Pkt.		
Early French, Short Horn, very early, small, for table or stock	5	20	1.50
Scarlet Horn, one of the earliest; excellent for the table; color deep			
orange; will grow very well on thin soil	5	15	1.00
James' Intermediate, fine form and color, good for shallow or very heavy			
soils	5	15	1.00
Improved Long Orange, an improvement on Long Orange	5	10	75
Large White Belgian, largest of all, very productive, good for horses;			
the crop can be pulled by hand	5	10	75

# CAULIFLOWER. Brassica Oleracea Botrytis Cauliflora.

Sow from the twentieth of May to the teuth of June, in open ground; transplant when large enough; cultivate same as cabbage, except to manure heavier and hoe oftener. In dry weather the Cauliflower requires abundance of water; hoe deep and

draw the soil up to the stem.		
Boston Market Improved Early Paris, a very popular American variety,	Pkt.	Oz.
extensively grown for the Boston Market	.15	1.00
Lenormand's Early Short-stemmed, reliable for general cultivation, fine		
large well-formed heads	10	1.00
Henderson's Early Snowball, new, very early dwarf compact habit, very sure to head.	95	
Veitch's Autumn Giant, the heads are magnificent, beautifully white, firm and compact; a valuable late sort. Some beautiful specimens were	20	
exhibited before the Mass. Horticultural Society last Autumn	10	1.00
Walcheren, a popular and valuable variety for early use; produces large white heads; resists the drought of summer better than many sorts	10	60

# CELERY. APIUM GRAVEOLENS.

Sow in hot-bed, or very early in open ground, covering from frost; prick off into beds of the richest soil when the plants are two inches high, and shade them until established. Transplant into rows four or five feet apart, in well-manured trenches a foot in depth, half filled with well-rooted manure; set the plants from ten to twelve inches apart in the rows. In all stages, from sowing the seed till it has nearly finished its growth it requires an abundance of moisture. The seed is rather slow to germinate. Earth up to blanch three or four times during the season, taking care that no earth falls in the centre of the plant. Pkt. Oz. Lb.

Boston Market, true (Crosby), the most popular variety in the Boston market; clear white, dwarf, crisp and solid ..... 10 White Solid, white, crisp and solid, a popular market sort..... 2.00 5 2.50 25 2.50 Turnip-rooted or Celeriac, forming turnip-shaped bulbs with celery flavor 20 2.50 Celery Seed, for flavoring soup or pickles..... 50

### CHICORY, CICHORIUM INTYBUS.

Sow broadcast, or in drills, in June; and, as it advances in growth, continue covering with light soil or old tan. Ready for use in September. Pkt. Oz. Lb. Large-rooted, or Coffee, used as a substitute for coffee..... 5 10 1.00

# CORN, SWEET. ZEA MAYS.

Corn delights in a warm, rich soil. Do not plant until the weather is so planted either in drills or hills, they should be about four feet apart each way. per pint, 20 cents per quart, extra, when ordered by mail.	10 c	ents
Black Sugar, or Mexican Sweet, sweetest and tenderest of all table varieties Burnham's Sweet, a late variety, ears very large; from twelve to six-	Pkt. 10	0z. 20
teen rows; very productive and of fine flavor	10	20
Early Minnesota, the earliest variety, very productive, of excellent quality	10	20

Large Purple, very large, hardy and productive, for stock	0z. 25 15 the be to .50 .00
Lettuce succeeds best in a rich and comparatively moist soil; the more rapidly to plants are grown the more tender and brittle will be their quality. Early sorts can sown in February and March under glass, and later in the open ground, and thinned 8 or 10 inches in the rows for heading sorts.  All the Year Round, new, a very fine variety for successful sowings.  Early Curled Silesia, very early, tender and sweet, makes a good head, 5 20 2.  Early Curled Silesia, very early, tender and sweet, makes a good head, 5 20 2.  Early Curled Silesia, very early, tender and sweet, makes a good head, 5 20 2.  Early Curled Silesia, very early, tender and sweet, makes a good head, 5 20 2.  Early Curled Silesia, very early, tender and crisps.  Soston Market, or Early Tennisball, white seed, for growing under glass; very early, heads well formed, hard and crisps.  Tennisball, black seed, for out-door culture, heads small, fine and tender.  Curled, the finest; forms a compact mass, and rosette of curled leaves 10 20 2  Perpignan, a fine German sort, excellent for a hot climate, does not run to seed as most other varieties.  10 25 3.	0z. 25 15 the be to Lb50 .50 .50 .50

PARSLEY, CHAMPION MOSS CURLED.

# LEEK. ALLIUM PORRUM.

Sow thinly, in very rich soil, as soon as it can be worked, in rows of ten inches apart; when four inches high, thin out to six inches in the rows; if the largest growth is desired, they should be transplanted from the seed bed ten inches apart each way, and well watered.

well watered.	771 4	
Broad London Flag, a short plant, with broad leaves, only on two sides	Pkt. 5	0z 15
Musselburg, short stem, very thick, broad leaves, very fine		30

# MARTYNIA. MARTYNIA PROBOSCIDIA.

# MELON, MUSK VARIETIES. CUCUMIS MELO.

Select a warm light soil, and sow ten or twelve seeds when the ground is warm, in hills five or six feet apart, and thin out, when danger from bugs is past, to four plants to a hill. When the vines are a foot long pinch off the end, which will cause the fruit to mature early. The hills must be made rich with thoroughly decomposed manure. Sprinkle the young plants with plaster, or air-slacked lime.

### TURNIP. Brassica Rapa.

For early use, sow in fifteen-inch drills as soon as the ground can be worked, and thin to five inches in the rows. For main crop, sow from last week in July to last week in August. Cover the seed lightly. Sow just before rain, if possible, as the success of this crop depends upon a quick, early growth. For field culture, Turnips are usually sown broadcast; but much larger crops are obtained by cultivating in drills, particularly of the Purk Bage.

# SPOONER'S LAWN GRASS MIXTURE.

# FOR LIGHT, MEDIUM AND HEAVY SOILS.

Per Bush., \$3.50; per Pk., \$1.00; per Qt., 20c. Two Bushels or more, \$3.00, by express. Extra Fine, per Bushel, \$4.00, by express. No charge for bags.

From three to four bushels are required to the acre for forming new lawns.

# Hints on the Formation and Improvement of Garden Lawns.

A good close velvety turt is one of the most ornamental objects in a landscape, and oftentimes the most difficult to obtain.

In the first place, careful preparation of the ground proposed to be laid down to turf is necessary. This should be commenced in the winter by graining, it found requisite, and digging to the depth of six or twelve inches, according to the nature of the soil. When this has been done, the land should be levelled and made firm with a roller, and subsequently raked, to remove stones, &c. Should the natural soil be too stony, it will be advisable to procure a supply of good loam, and spread it over the land to the depth of two or three inches. If the soil is poor, some well rotted stable dung will be very beneficial. In April, after the ground has been made thoroughly fine and clean, a heavy roller should again be used to make it perfectly level; and as the subsequent appearance of the Lawn depends in a great measure on this part of the preparation, we cannot too strongly urge the importance of its being well done. The ground should then be evenly raked, and the seed sown. April and September are the best months for sowing, but it may be sown in Spring as late as the middle of May, and from the last week in August until the middle of October.

After the sowing has been accomplished, the ground should be again rolled, and as soon as the young plants have attained the height of two or three inches, the whole plot should be carefully gone over with a sharp scythe, and from the months of April to October it should be mown every ten days. Frequent mowing and rolling are indispensable to maintain the turf in good order. Moving machines are excellent after a comparatively close turf is established, but the first six months after sowing we recommend the use of the scythe.

For Lawns requiring improvement, sow tresh seed, at the rate of about one bushel per acre, either in the spring or autumn, using a small tooth rake, and rolling afterwards.

Clover, White Dutch (Trifolium repens)....... per 1b., by mail, 56c.; by express, 40c.

# VARIOUS GRASSES.

Red-Top Grass (Agrostis vulgaris). Desirable as a mixture in either pasture or lawn grasses; will grow almost anywhere. About 2 bushels to the acre (14 lbs. to bushel). Per Tacket, 5c.; per quart, 10c.; per bushel, \$1.50.
Kentucky Blue Grass (Poa Pratensis), known as June Grass, thrives best in dry soils,

producing herbage early in the season; valuable as a mixture with other grasses for lawns; 14 lbs. to bushel, 1½ to 3 bushels to the acre. Per pkt., 5s.: per quart, 10c.; per bushel, \$2.00.

Rhode Island Bent Grass (Agrostis stolonifera), an excellent variety for lawns, 11 lbs.

to bushel, 2 to 3 bushels to the acre. Per pkt., 10c; per quart, 15c.; per bushel, \$3.50.

Timothy, or Herds Grass (Phleum pratense). More extensively grown than any other variety, more productive and nutriciou, than any other kind; 45 lbs. to a bushel, to I bushel to the acre. Per pkt., 10c., market price. These prices are subject to slight variations in the market, in quotations by the bushel, ex-

press to be paid by purchaser. Remit 16c. per pound, or 10c. per quart, extra, when ordered by mail,

### Quantity of Vegetable Seeds, &c., Generally Used per Acre.

Onion, for Sets, in drills, 30 lbs.
